10

CLAIMS

- A breather sheet for use in the curing of a composite part comprising two 1. distinct, affixed outer layers with a mesh layer interposed therebetween, each of the outer layers being provided with a plurality of holes prior to assembly of the breather sheet, the holes being configured and disposed 5 such that when the two outer layers are fixed together to form the breather sheet a plurality of passageways is formed for air and/or volatiles to pass freely through the breather sheet, the passageways being configured and disposed such that that the interposition of the mesh layer in any position or orientation relative to the outer layers does not substantially obstruct all of the passageways.
 - A breather sheet as claimed in Claim 1 wherein the outer layers are made 2. of a semi-rigid material.
- A breather sheet as claimed in Claim 1 or 2 wherein the mesh layer is 3. 15 incompressible in one plane.
 - A breather sheet as claimed in Claim 1, 2 or 3 wherein the outer layers 4. and mesh layer are bonded together with adhesive.
- A breather sheet as claimed in any of the preceding claims wherein at 5. least a portion of the circumference of the breather sheet is adapted to abut another breather sheet in such a way that adjacent breather sheets 20 can be used to form a composite breather pack.
 - A breather sheet as claimed in any of the preceding claims pre-formed to 6. the required shape for the composite component.
- A method of assembly of a breather sheet comprising two other layers and 7. a mesh layer such that the assembled breather sheet has a plurality of 25 passageways therethrough for the free passage of air and/or volatiles, the method comprising interposing a mesh layer between two other layers, each of which is provided with a plurality of holes prior to assembly, aligning the two outer layers and the mesh layer, and fixing the layers 30 together to form a unitary breather sheet.

- 8. A method according to Claim 7 comprising bonding the two outer layers together with the mesh sandwiched there between.
- 9. A method according to Claim 7 or 8 comprising shaping the two outer layers to form a breather sheet of a predetermined shape.
- 5 10. Use of a breather sheet as claimed in any of Claims 1 to 6 in the curing of a composite part.
